

Christopher J. Miller

COMPUTER ENGINEER IN SEATTLE, WA

☎ (941) 374-1788 | ✉ hello@chrismiller.xyz | 🏠 chrismiller.xyz | 📱 ChristopherJMiller | 🌐 ChristopherJMill

Experience

Microsoft

Redmond, WA

SENIOR SOFTWARE ENGINEER

Mar. 2022 - Present

- Architected Today for Copilot, a persistent memory and briefing generation pipeline designed to scale to millions of users and provide personalized briefings for Microsoft 365 users.
- Built Today edge services and scalable ephemeral pipelines to support incremental user learning, memory, and actionable item generation.
- Evaluated AI quality and cost tradeoffs for various LLMs and agentic styles to optimize for product profitability and user experience.
- Benchmarked and implemented custom agentic AI coding solutions for Office repositories, achieving measurable improvements in code generation quality versus baseline Microsoft offerings across legacy and greenfield codebases.
- Built performant agentic chatbots that answer questions over Outlook's large internal documentation repositories.
- Owned the organization's Azure infrastructure, deploying reproducibly across Kubernetes clusters via Terraform and GitOps.
- Implemented suite of microservices in Rust to support our custom AI solutions, including user authn/authz, LLM load balancing + latency reduction via geo-sharding, billing, usage tracking, tooling version rollouts, and observability.

Mount Thor

Online

MEMBER OF TECHNICAL STAFF, MOONLIGHT CONTRACTOR

Apr. 2026 - Present

- As Engineer #1, took the founders' prototype neocloud to a production-ready, scalable system that is closing funding and customer contracts.
- Built distributed services in Rust/Go for billing, node access, the user portal, and observability.
- Architected SOC2-compliant infrastructure across AWS, GCP, Cloudflare, and self-managed bare metal.
- Helped hire the founding engineering team, including the CTO, and established agentic development practices: in-house MCP servers, agent skills, and dev loops that let coding agents contribute across repositories quickly and rigorously.

Microsoft

Online

SOFTWARE ENGINEERING INTERN

May - Aug. 2020 & 2021

- Created Azure DevOps CI/CD pipelines for Android and iOS platform validation as well as package publishing.
- Developed a high demand feature for the Outlook Android Calendar during my second internship.

Education

University of Florida

Gainesville, FL

COMPUTER ENGINEERING B.S. (GPA: 3.92)

Aug. 2018 - Dec. 2021

- Relevant Coursework: Discrete Structures, Data Structures & Algorithms, Operating Systems, Computer Organization, Microprocessors, Performant Programming, Digital Design, Programming Language Concepts, Database Systems, Digital Logic, Computational Linear Algebra, Software Engineering, Data Science, Human Computer Interaction

Leadership

Association of Computer Engineers

Gainesville, FL

SECRETARY

Jan. 2020 - Dec. 2020

- Managed and aided in the development of ACE Cloud, a Kubernetes cluster free for use by club members to learn and host projects.
- Developed ACE Events, an online system for managing attendance as well as providing a single location to view all upcoming events.

Skills

Languages

Rust, Go, C, C++, C#, TypeScript, Python, Java, Kotlin, Swift, Elixir, Ruby, SQL

Frameworks

React, React Native, Vite, Tauri, Tailwind CSS, Express, Hono, ASP.NET, Ruby on Rails, GraphQL, Bevy, wgpu

Infrastructure

Linux, Nix, Kubernetes, Helm, Istio, Envoy, Traefik, Docker, Terraform, Ansible, AWS, Azure, GCP, Cloudflare Workers, Bare Metal, PostgreSQL, MongoDB, S3, Prometheus, Alertmanager, Grafana, Alloy, CloudWatch, incident.io

Platform

GitHub Actions, Azure DevOps, Tekton, Forgejo, WorkOS SSO, Vanta, SOC2

AI Systems

LLM & Agentic Systems, MCP Servers, Agent Skills, Embeddings & Semantic Search, LLM Evaluation, Claude Code, GitHub Copilot, Gemini CLI, OpenRouter, vLLM & Local Inference
